

# AgilePoint Sponsors Keynote Presentation

03/03/2014 8:30 AM

It is our honor to be the sponsor of this year's Keynote Address. AgilePoint, the leading provider of Microsoft-based Business Process Management (BPM) software products, has 1,300+ on-premise and cloud deployments in 25+ countries and provides the same advanced BPM feature set as J2EE vendors like IBM and Appian in the Microsoft .NET native environment. AgilePoint customers use Microsoft tools they are already familiar with like Visio, SharePoint, Excel and Word to build both mission-critical and everyday process applications in half the time of other BPM products while modernizing their Microsoft experience and maximizing ROI for their complete Microsoft stack. AgilePoint products, which include Enterprise-class BPMS, Azure cloud-deployed BPM, Xtreme Workflow for SharePoint and embedded BPM technologies for OEMs, are providing the power of process automation applications to manufacturing, energy, financial, insurance, healthcare, government and many other types of organizations.

Our flagship platform, AgilePoint iBPMS, consists of components used to create mission critical business applications: Server, Designer, Portal, AgileForms, and AgileReports. Together, they provide an application development framework that enables business and IT to collaborate throughout the development lifecycle.

**SERVER**

**DESIGNER**

**PORTAL**

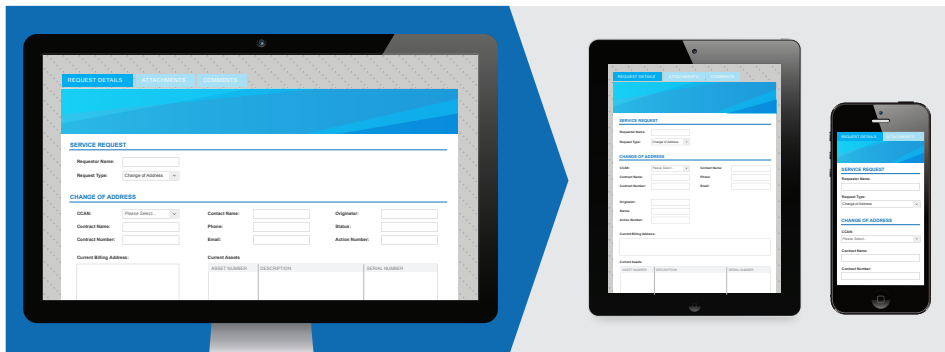

**FORMS**

**REPORTS**

## NEW: Mobile Form Auto-Layout

AgileForms automatically transforms your web forms from Browser layouts to Tablets and Smartphones dynamically - without any additional coding or formatting. Create even complex web browser forms in AgileForms and behind the scenes those forms are immediately available at run time optimally formatted for your tablets and smart phones.

## BOOTH# 809

### Booth Theater Presentations

#### SELF SERVICE APPLICATIONS

Social and Mobile BPM Integrating Yammer, SharePoint and Enterprise data for a new class of applications

#### HYBRID ENTERPRISE APPLICATIONS

Hybrid On-premise / Cloud applications combining Office 365, Dynamics CRM, SharePoint, Salesforce, etc.

#### BUILDING AZURE APPS TODAY

Building Cloud applications and a Travel Request demo running on Azure

#### FUTURE PROOFING SHAREPOINT

Simultaneously running SharePoint 2010, SharePoint 2013 and Office 365

### Partner Led Session

Join our customer panel on Tuesday March 4th at 10:45-12:00 PM in the Veronese 2401-2506 room as we discuss enterprise-wide integrations with Yammer and SharePoint.

### Partner Theater Presentation

Join our partner presentation (PT010) Tuesday March 4th at 1:45 pm in the Partner Theater in Expo Hall C/D, where a partner discusses reducing Business Risk with Automated Compliance Solutions.

### Booth Demo Presentations

#### BUDGET REQUEST

Basic SharePoint List Process

#### DOCUMENT GENERATION

AgileForms, SharePoint Document Library, and Mobile Approval Native Forms

#### EMPLOYEE ON-BOARDING

InfoPath Form Services and AgileForms

#### REAL TIME DASHBOARDS

End-to-end management visibility across existing line-of-business systems

### Social BPM

AgilePoint Social BPM supports Yammer, Salesforce Chatter, Lync and SMS Text Messaging so you can create innovative ways to collaborate, provide business process runtime decisions and documentation, and deliver remarkable new self-service applications through secure private and public social connections.

### Mobile BPM

AgilePoint Mobile BPM features allow organizations to securely extend existing processes to current and future mobile devices with a consistent strategy through a simple, familiar development cycle. AgilePoint Mobile BPM provides secure native application delivery of AgilePoint processes and forms on iOS, Android and Windows 8 platforms thus extending the full power of process automation to mobile touch points everywhere.

### Cloud BPM

AgilePoint Cloud BPM provides business process automation in a Platform-as-a-Service, PaaS, offering. AgilePoint customers are using Cloud BPM to provide organization-wide shared Business Processes as a Service, to speed up time-sensitive application development and deployment, to scale seasonal processes and workflows, to provide distributed work across organizational and geographic boundaries and to support internal Cloud computing initiatives through hybrid and private clouds.

### Sustainable SharePoint

As SharePoint has progressed new features like SharePoint farms and O365 Cloud support have enterprises excited to utilize such advanced functionality yet their IT organizations struggle with incompatible third-party product integrations, failing custom applications, and the need to refactor their myriad business critical workflows necessary to make each successive version work. AgilePoint breaks this cycle by allowing you to future-proof your SharePoint investments and stop creating technical debt. Evolve your SharePoint topology through a transparent, managed, step-by-step migration over time while simultaneously maintaining existing SharePoint versions and applications on servers, farms and in Office 365.

### Multi-Platform SharePoint

Despite advancements made in SharePoint 2013 and Office 365, only 45% of the SharePoint community plans to upgrade in 2014. Most organizations using SharePoint for mission critical applications are struggling to find a safe, cost-effective, step-by-step strategy to manage, consolidate and migrate multiple SharePoint platforms and versions. AgilePoint's support for multiple platform SharePoint topologies allows you to change server sprawl to centralized service management.

### Enterprise Engagement Through SharePoint

When combined with Yammer, SharePoint can help your workforce and other stakeholders better participate in process and self-service applications wherever they work – on desktops, laptops and mobile devices. Quickly and easily create custom intranet portal pages, forms and applications that provide custom user experiences while combining line-of-business data from existing enterprise systems regardless of whether that data resides in resources like SharePoint or Dynamics CRM, cloud environments like O365 or Salesforce.com, third-party applications like SAP or from in-house developed systems. Modernize your IT offerings without incurring new technical debt by creating user-friendly process applications using AgilePoint.
